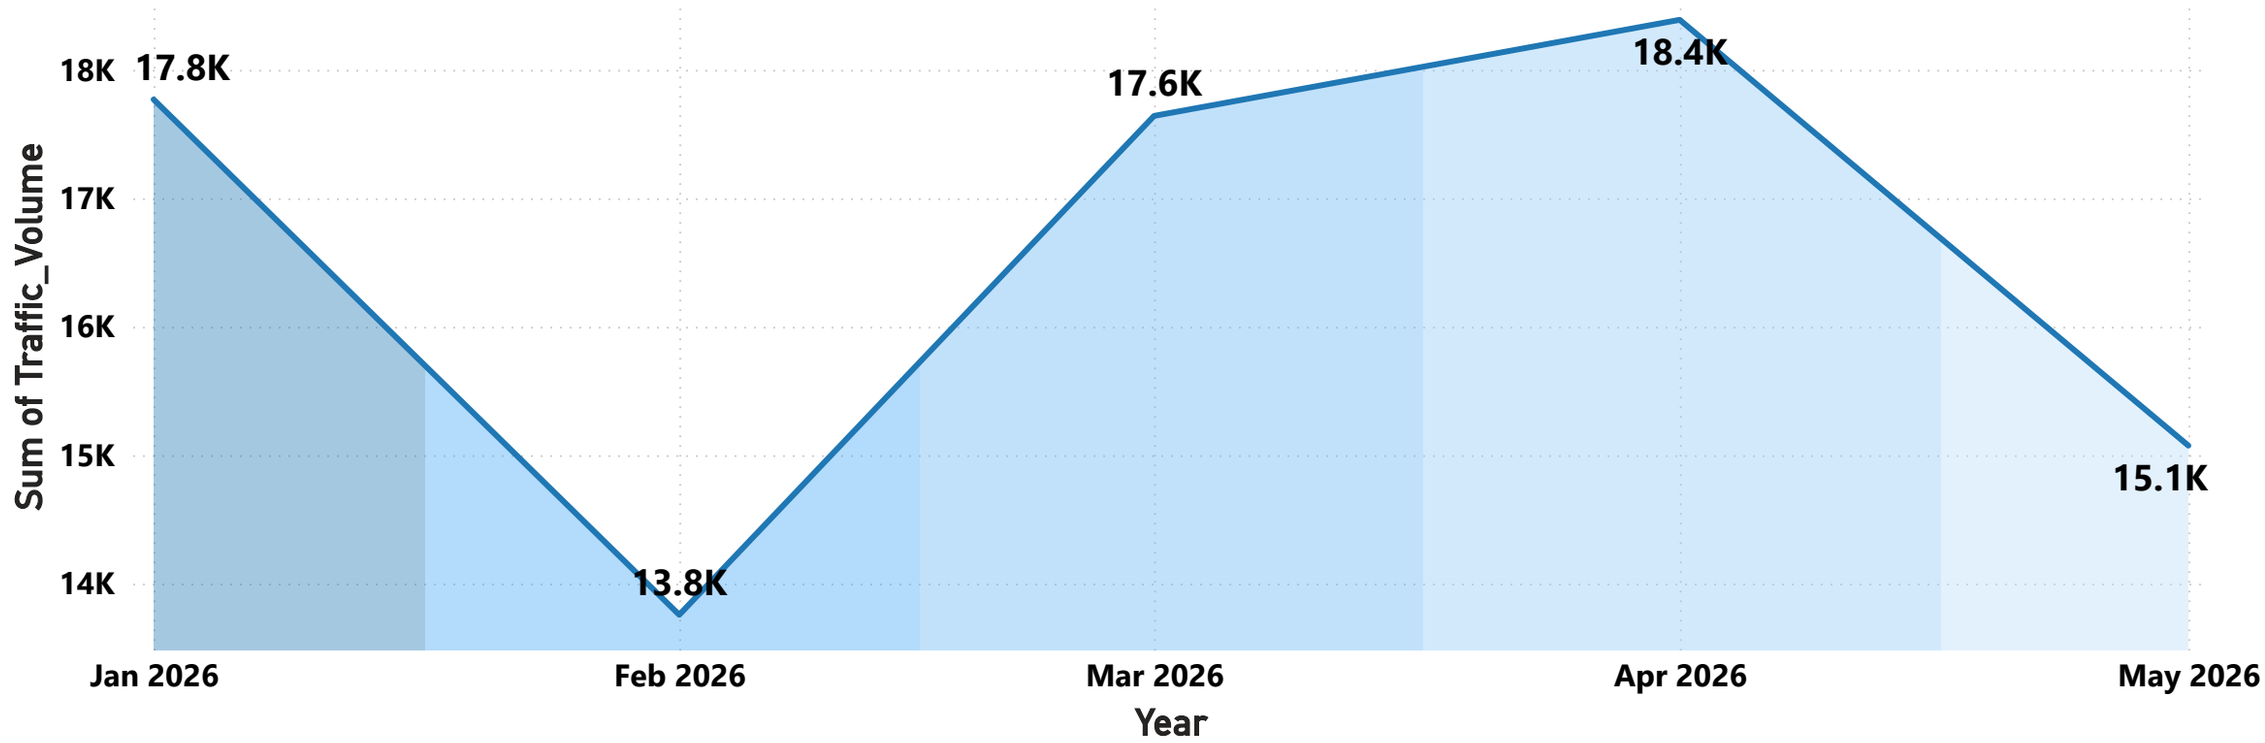
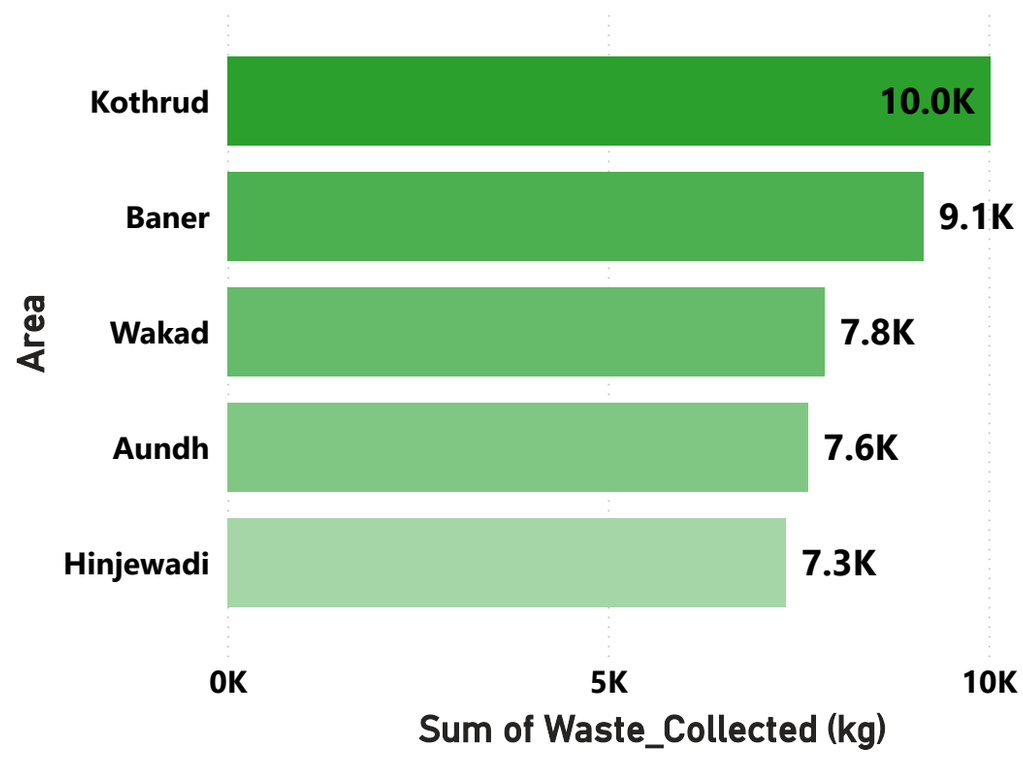
Smart City Analytics Dashboard

Average Traffic Speed (Km/h))	Total Waste Collected (Kg))	Total Energy Consumption (KWh)
34.90	41979	168845

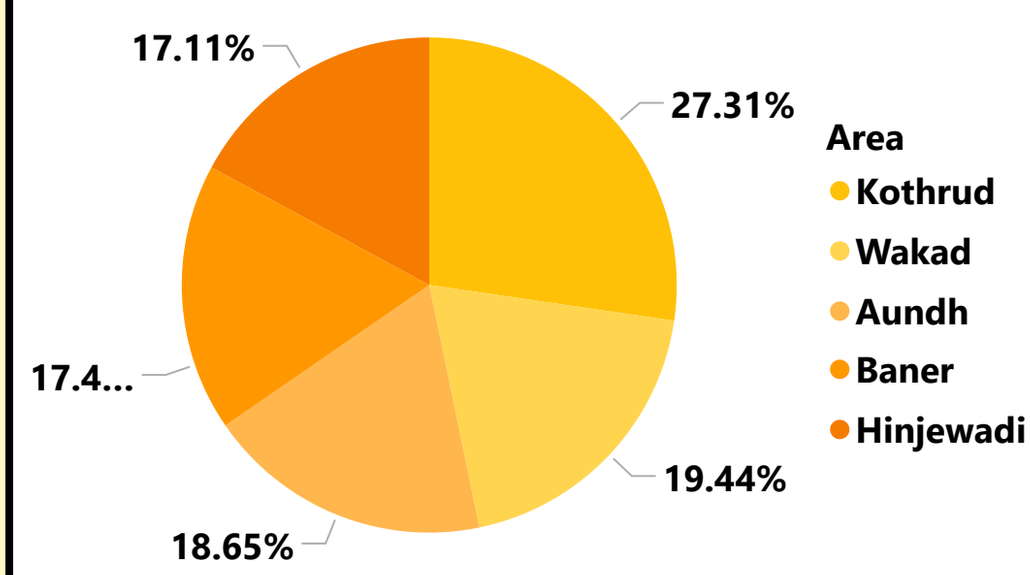
Traffic Volume Trends Over Time



Waste Collection by Area



Energy Consumption Distribution by Area



Key Insights

Transportation

- Peak congestion observed in April (18,389) vs lowest in February (13,757), indicating need for better traffic control during peak periods.
- Average speed is 34.9 km/h, showing moderate traffic flow and scope for optimization using smart signals.

Waste Management

- Kothrud generates highest waste (10,025 kg) while Hinjewadi is lowest (7,340 kg), showing uneven waste distribution.
- Total waste collected (41,979 kg) highlights need for efficient collection and route optimization.

Energy

- Kothrud consumes highest energy (27.31%) while Hinjewadi is lowest (17.11%), indicating area-wise imbalance.
- High total energy usage (168,845 kWh) suggests need for energy-efficient systems and renewable adoption.
